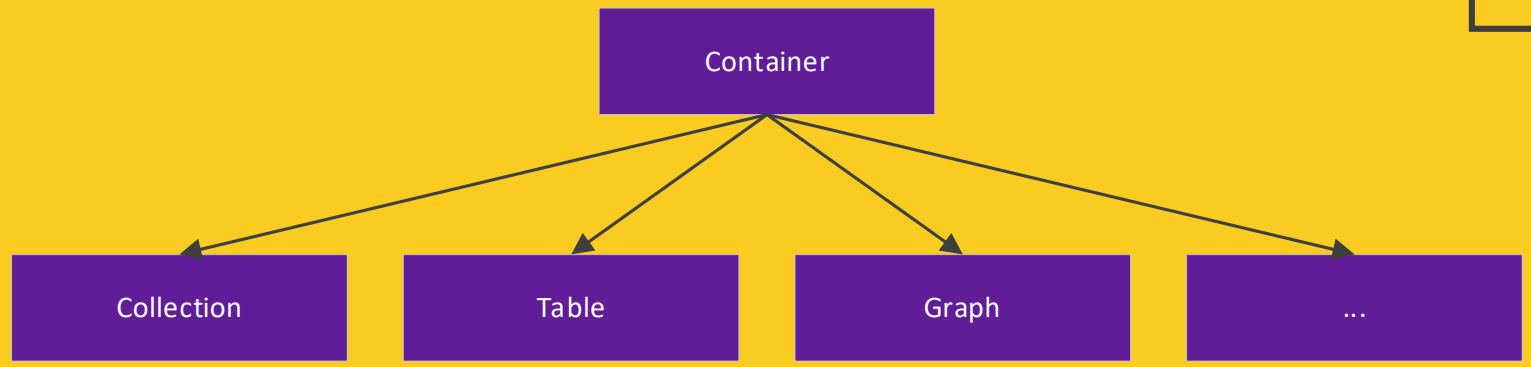
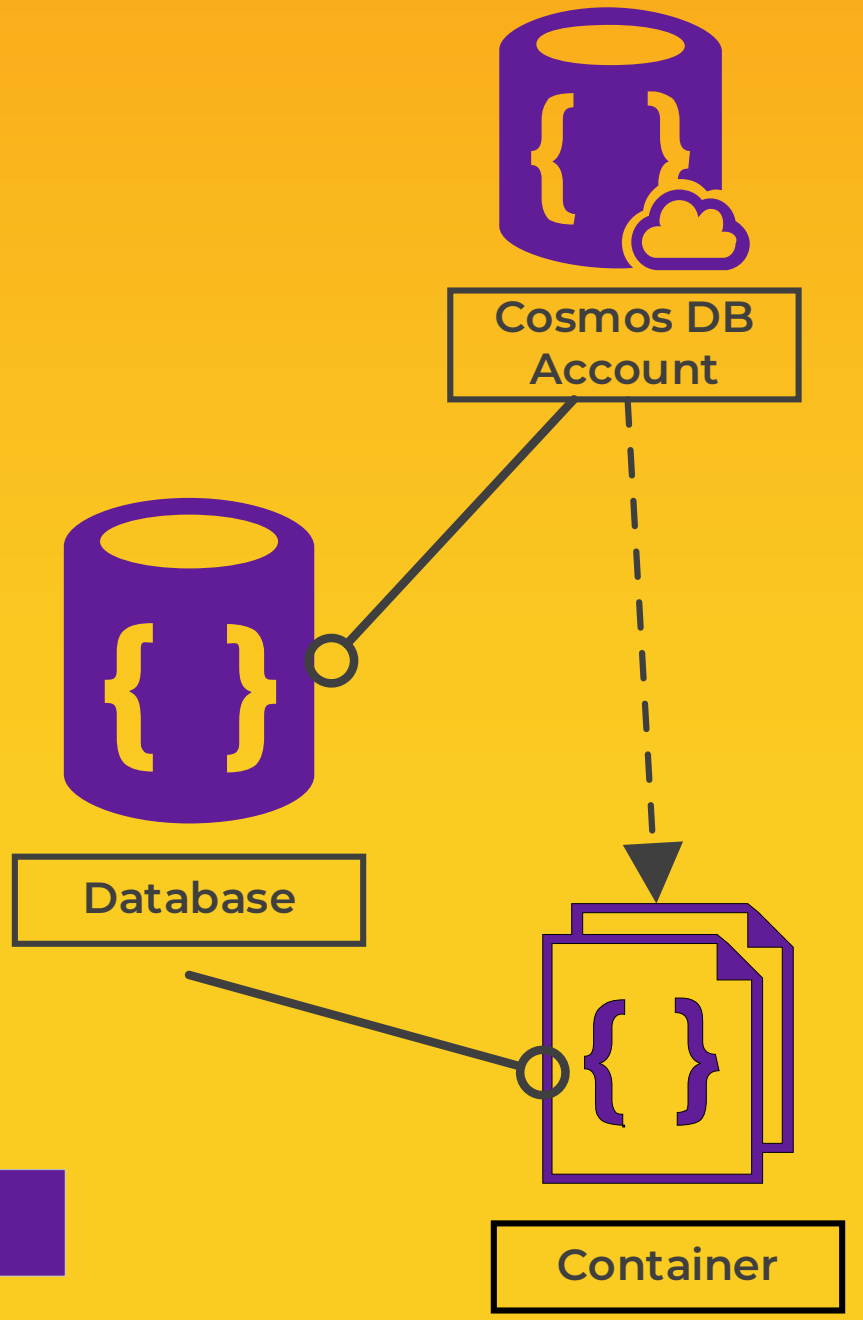
COSMOS DB
ARCHITECTURE

Elements in an Azure Cosmos DB Account

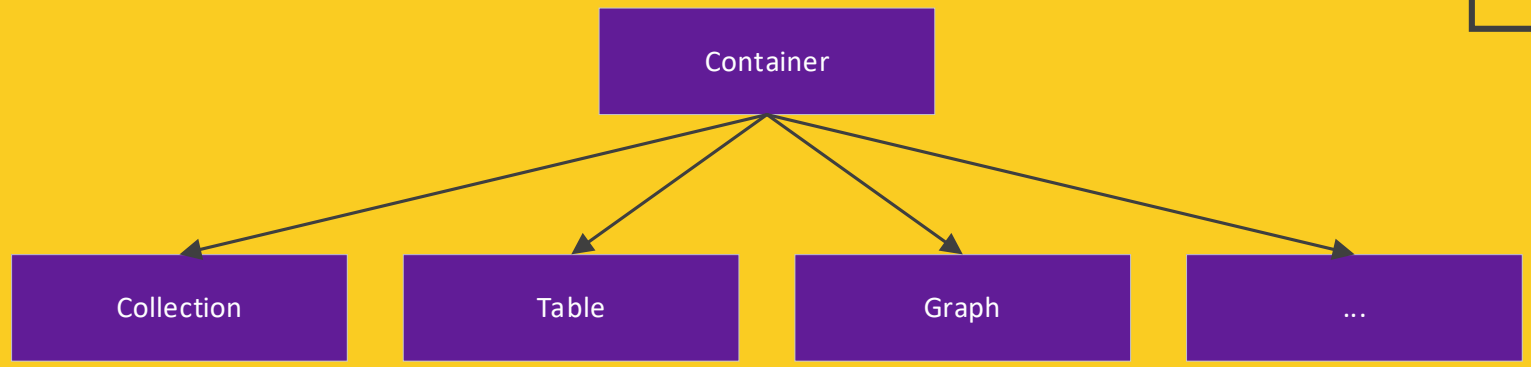
- Provision Azure Cosmos DB Account
- Create database in that account
- Add containers on those databases
- Container can be realized based upon the data API

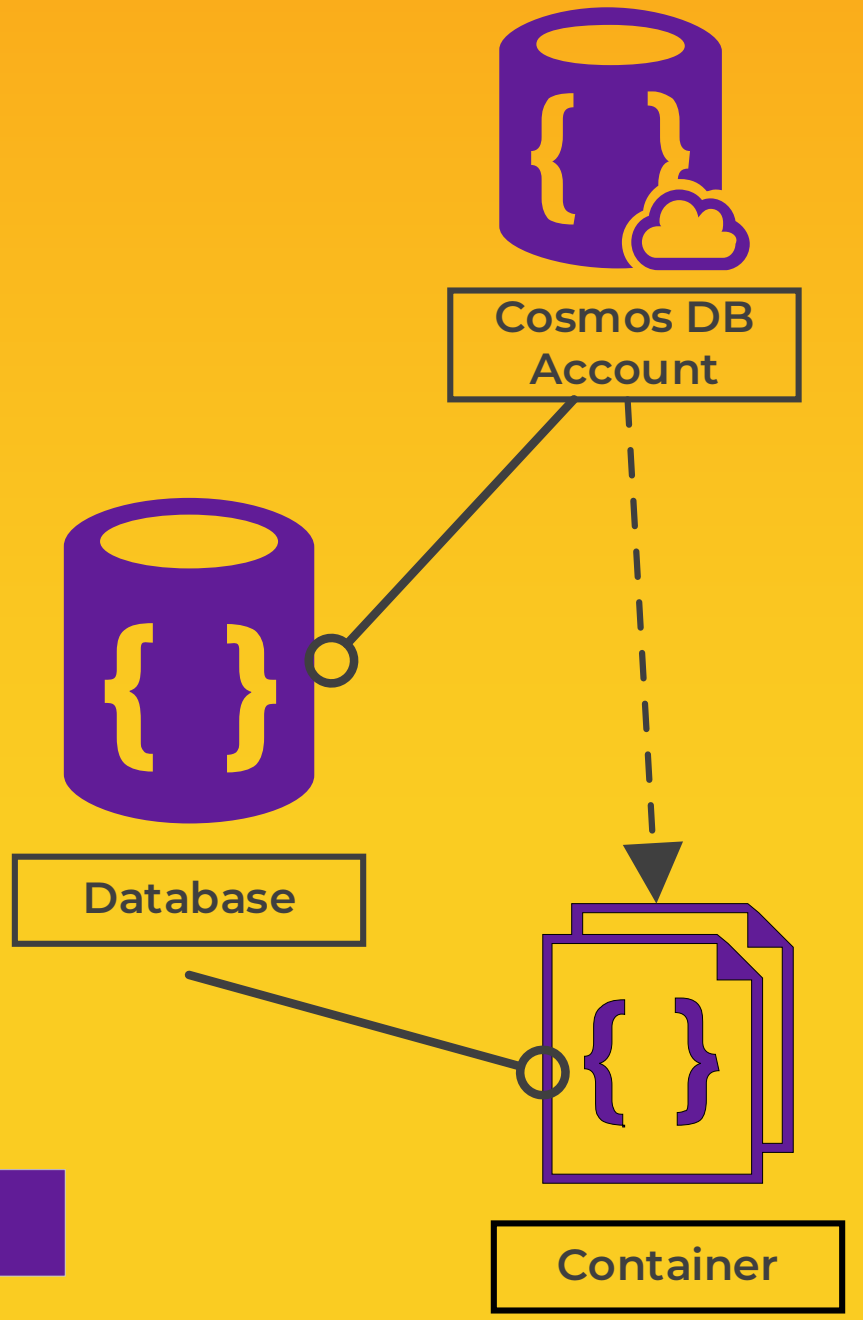




Elements in an Azure Cosmos DB Account

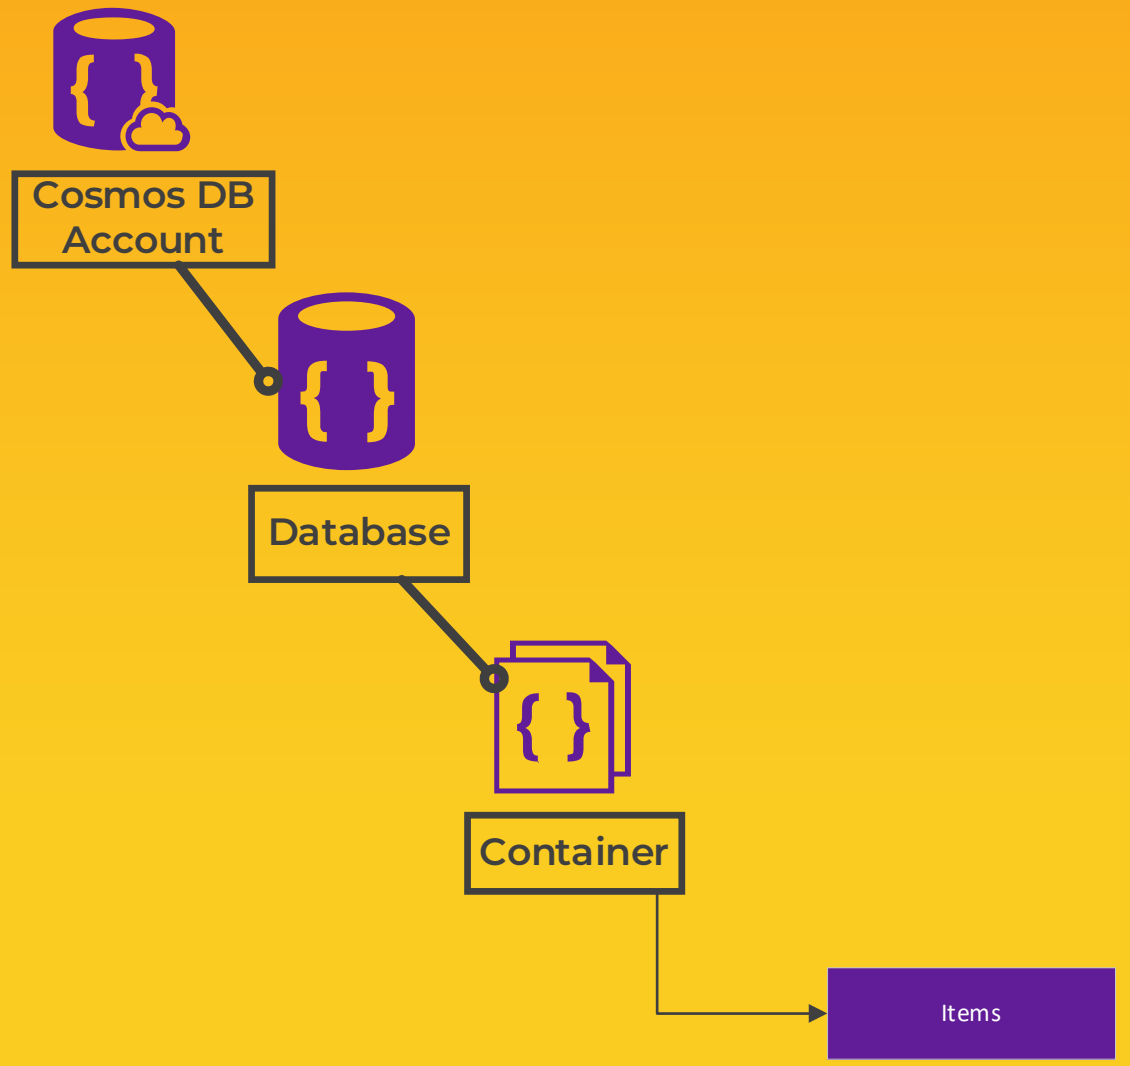
- Provision Azure Cosmos DB Account
- Create database in that account
- Add containers on those databases
- Container can be realized based upon the data API

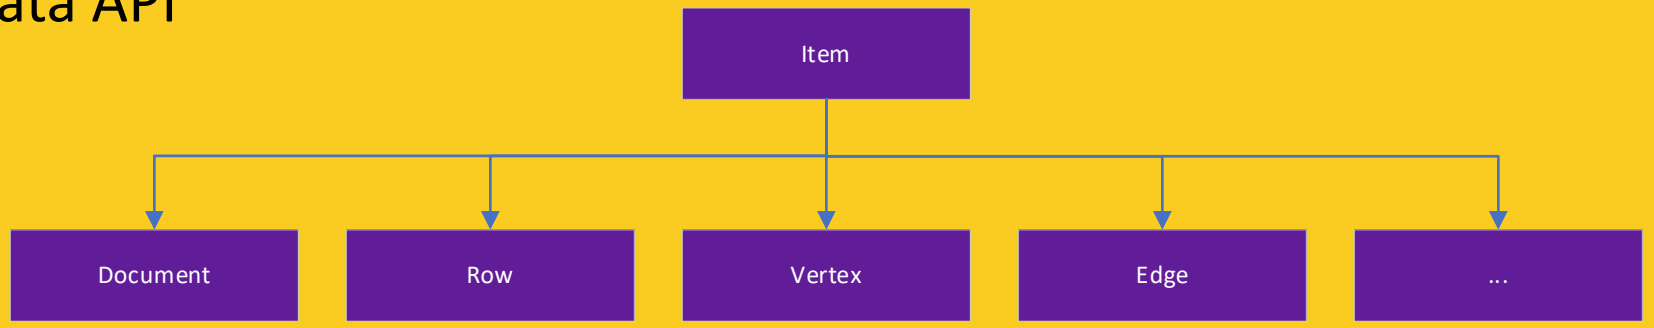




Elements in an Azure Cosmos DB Account

- Provision Azure Cosmos DB Account
- Create database in that account
- Add containers on those databases
- Container can be realized based upon the data API
- Items are realized based upon the data API





Elements in an Azure Cosmos DB Account

- Provision Azure Cosmos DB Account
- Create database in that account
- Add containers on those databases
- Container can be realized based upon the data API
- Items are realized based upon the data API

Estimate RU Costs

Operation	Estimated Costs
Create an item	5 RUs
Update an item	10 RUs
Read an item (point read)	1 RU
Delete an Item	5 RUs
Execute a query	10 RUs

Operational RU Costs

Operation	Estimated Cost	Notes
Create an item	5 RUs	Average cost for a 1-Kb item with less than 5 properties to index
Update an item	10 RUs	Average cost for a 1-Kb item with less than 5 properties to index
Read an item (point-read)	1 RU	Average cost for a 1-Kb item
Delete an item	5 RUs	
Execute a query	10 RUs	Average cost for query that takes full advantage of indexing and returns 100 results or less

Spreads RU Consumption

Choosing a partition key

Unchanging Property Value

High Cardinality

Spreads RU Consumption

Common Filter

Using Item Id as the Partition Key

Wide Range of Possible Values

Balances RU Consumption

Point Reads Become Easier

Using Item Id as the Partition Key

Wide Range of Possible Values

Balances RU Consumption

Point Reads Become Easier

Partition key will become unique identifier

Should have an equality filter with the *item Id*

Stored Procedures/Triggers Cannot Run Across Multiple Partitions

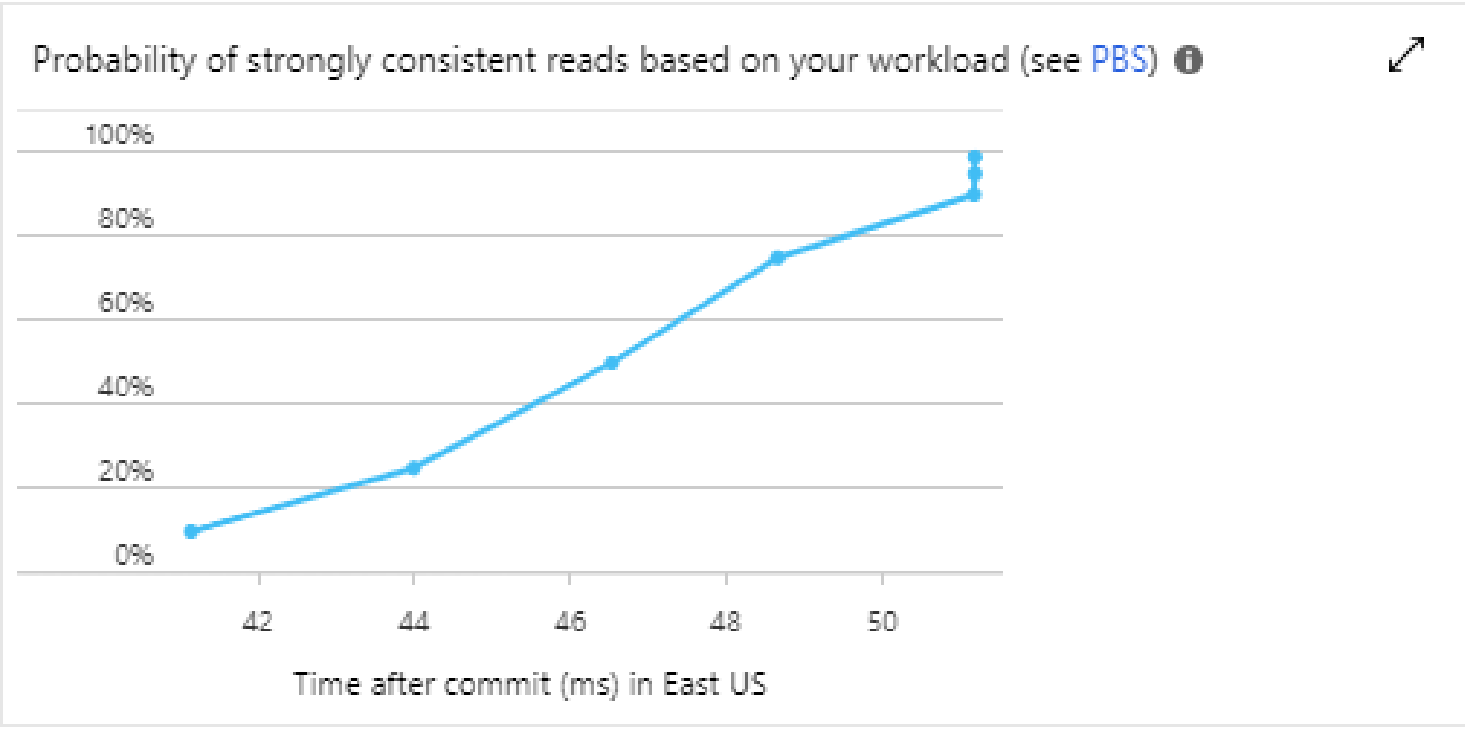
Consistency Levels – Eventual

Consistency Guarantees in Practice



SERVICE QUOTAS

Service Quotas – Provisioned Throughput

Resource	Default Limit
Maximum RUs per container	1,000,000 (by default)
Maximum RUs per database	1,000,000 (by default)
Maximum RUs per (logical) partition	10,000
Maximum storage across all items per (logical) partition	20-Gb
Maximum number of distinct (logical) partition keys	Unlimited
Maximum storage per container	Unlimited
Maximum storage per database	Unlimited
Minimum RU/s required pre 1-Gb	10 RU/s

Service Quotas – Serverless

Resource	Default Limit
Maximum RU/s per container	5,000
Maximum RU/s per (logical) partition	5,000
Maximum storage across all items per (logical) partition	20-Gb
Maximum number of distinct (logical) partition keys	Unlimited
Maximum storage per container	50-Gb

Service Quotas – Per-Account Limits

Resource	Provisioned Throughput	Serverless
Maximum number of databases	Unlimited	Unlimited
Maximum number of containers	Unlimited per account 25 per database	100 per account
Maximum number of regions	No limit (All Azure regions)	1 (Any Azure region)

Service Quotas – Per-Item Limits

Resource	Default Limit
Maximum size of an item	2-MB
Maximum length of partition key value	2048 bytes
Maximum length of ID value	1023 bytes
Maximum number of properties per item	No practical limit
Maximum length of property name	No practical limit
Maximum length of property value	No practical limit
Maximum length of string property value	No practical limit

Service Quotas – Per-Request Limits

Resource	Default Limit
Maximum execution time for single operation	5 Seconds
Maximum request size	2-Mb
Maximum response size	4-Mb
Maximum number of operations in a transaction batch	100

Service Quotas – Try Cosmos DB Free Limits

Resource	Default Limit
Duration of the trial	30 days
Maximum containers per subscription	1 (SQL, Gremlin, Table) 3 (MongoDB)
Maximum throughput per container	5,000
Maximum throughput shared-throughput database	20,000
Maximum total storage per account	10-Gb

Service Quotas – Free Tier Account Limits

Resource	Default Limit
Number of free tier accounts per Azure subscription	1
Duration of free-tier discount	Lifetime of the account
Maximum RU/s for free	400 RU/s
Maximum storage for free	5-Gb
Maximum number of shared throughput databases	5
Maximum number of containers in a shared throughput database	25
